

Ms. Mega Bucks owns a building located near your school and has some money to invest. She has asked your advice as to what kind of store to place in the building. You have advised her that she needs to sell what kids like. You have volunteered to conduct a survey of the students in your school to determine their likes.

Compose a questionnaire to be used in conducting a survey. Be sure the questionnaire is clear and simple to understand. Pass out the questionnaire to the students in your school. Stress that all students return the questionnaire to you. Tabulate the results.

Imagine that your teacher is Ms. Mega Bucks and in the presence of the class analyze your results. Recommend the type of store she should place in the building.
