

Mathematics, Grade 5

Unit II: Lesson B6

Story: **Subtraction Reading**

Using the most recent story you've read, construct at least six story problems that could be answered based upon either information you supply in the question or information that the careful reader could find in the story itself. Your problems should be written in both complete word sentences and number form. Each problem should also include the correct answer. All of your problems must require primarily subtraction to solve.

When you've finished, ask the teacher to let you quiz the rest of the class with your problems.
