

Social Studies, Grade 2  
Unit VI: Lesson B2

Poster: **House Design**

Choose three or four countries in very different parts of the world. Research those countries to learn what kinds of houses they live in. Look for the kinds of houses there are in the country and in cities. Read about the climate of each of those countries. Learn if it is cold or hot or wet or dry.

Think about the different kinds of houses. Decide how the climate of each country affects the way houses are built.

Using poster size paper, draw pictures of each kind of house. Label the parts of the house that are designed to protect the people from the climate.
