

Mathematics, Grade 6

Unit II: Lesson 3

Chart-Game: Foreign Language Math

Research the names of the numbers one through ten in Spanish, German, French and/or other languages.

Create at least 20 multi-step, one digit problems using these languages.

Examples: (Spanish)

$$(\text{cinco} \times \text{ocho}) - (\text{seis} \times \text{seis}) = ?$$

$$(\quad ? \quad) \times (\quad ? \quad) = \text{cuatro}$$

Design, make and display a chart showing the names for the numbers in each of the languages.

Duplicate for your class a list of your problems in a game-type form.
