

Pick an athlete from a sport you like. You are to keep track of his/her statistics for two weeks. Choose more than one category to base your stats on.

**Examples:** Basketball – points per minute played or fouls per game, etc.

Football – passes per game or touchdowns per game, etc.

Find out how much money your athlete makes per year. Use your statistics creatively to calculate how much your super star gets per strikeout, per point, per game, per pass, or any other such actions.

Make a large, attractive bulletin board display showing your super star stats. Include pictures of your super star.
