

Research data on world population growth for the past few years. Research data on growth and membership of the Seventh-day Adventist church for those same years. Your local conference office may be a good source for information.

Analyze the population and membership data. Using this data, predict how many years it would take for the whole world to become members of the Seventh-day Adventist church.

Formulate recommendations that would reduce the time it would take for Seventh-day Adventists to convert the world.

Write an essay proposing your recommendations. Be sure to include all substantiating data with charts or tables.

Read the essay to the class.

Extension: Repeat the above project using data for any religion. Make the same calculations and predictions.
