

Mathematics, Grade 5

Unit I: Lesson A2

Display: **Inventing Number Systems**

Research and find examples of different number systems.

Imagine that you are a Native American in an ancient culture. You want to invent a written number system. Make a display for the bulletin board of your number system, showing the numbers up to 30.

At the bottom of your display, explain why you made the numbers the way you did. Answer these questions in your explanation:

1. How did you make the symbols easy to read?
2. Why are the symbols easy to remember?
