

Mathematics, Grade 5

Unit I: Lesson B4

Bulletin Board: **Place Value Teaching Device**

Research different types of charts or other devices used to teach place value.

Based on what you find, create a new, different, or better device that can be used to help students to understand place value through the millions. Make your device and explain it to the class in a bulletin board display.

If time allows, ask the teacher to let you teach a brief lesson about place value to the class using your new device.
