

Imagine you are going to start a zoo for endangered animals. Research the names of the endangered animals you would like to have in your zoo. Then, prepare a chart with the following information:

- Types of animals
- Estimated weekly food consumption of each animal
- Estimated cost for food for each animal per week
- Estimated total cost for food per week
- Estimated total weekly operating costs
- Start-up and other non-recurring costs

Include any other information you think would be important in your plans. Display your findings when you have finished.
