

Mathematics, Grade 5

Unit II: Lesson B2

Chart / Display: **Differences Between States**

Use an almanac, atlas, encyclopedia, or the Internet to find the areas in square miles of at least ten states. List them from largest to smallest.

Make a chart to show the differences in size between each state.

Now do the same with the population of each state.

Finally, write a brief essay analyzing any patterns and relationships you believe are present between population, location, and area.

Present your findings in an easy to understand format for a bulletin board.
