

Mathematics, Grade 5

Unit II: Lesson C2

Display: **Map Usage**

Use a map (including its key) to find out the distance in miles or kilometers between several different important places. Include any cities or other places that you think are important.

Create a display that clearly expresses the distance between various places.

Compare and contrast various reasonable routes to a similar destination. Include routes with a real advantage, such as shorter distance, better road conditions, or more scenic vistas. In each instance where you offer more than one route to a similar destination, include an explanation of the advantages for each route.

Ask the teacher where you can display your work when you have finished.
