Mathematics, Grade 5
Unit II: Lesson C3   Newspaper Advertisement: **Energy Savings**

Using the Internet, newspaper, library, or public utilities company, research the cost of at least five energy-saving home improvements. Calculate the estimated savings per year for each improvement. (Finding out the average yearly cost for electricity and/or gas in your community may be necessary.)

Compute the number of years necessary to recoup the original cost of each improvement.

Develop a newspaper advertisement using your data in chart form for the home improvement you think is best.
