

Mathematics, Grade 5
Unit III: Lesson B1

Calculation: **Increasing a Recipe**

Choose a favorite recipe, write it down, and bring it to school. At school, double the recipe, writing down twice as much of each ingredient. Then, multiply by 1.5. Finally, multiply by whatever number to make enough for the entire class. Use decimals when you do this wherever possible.

If you want to (you can bring the ingredients), ask the teacher if you can make your recipe for the class, at school or at home.
