

Mathematics, Grade 5

Unit VII: Lesson C1

Calculation / Display: **Schedules**

Obtain an airline, bus, or train schedule from a travel agency or the Internet. Determine the fastest way to get between any two places at least 200 miles apart, and to which you would like to go.

Make a schedule chart in which you show your departure station, time of departure, time it takes to get there, arrival station, and arrival time.

Compile your information into a uniquely informative display for the class to see.
