

Mathematics, Grade 5
Unit VII: Lesson C4

Schedule: **My Week**

Think about all that you must do within the next week, including the weekend.

On paper, prepare a daily schedule, showing what you will probably be doing during each hour of the day. Be sure to include everything!

After you've completed your schedule, analyze it to determine what you spend most of your time doing. List the top three activities at the bottom of your schedule. Do these activities surprise you?

Next, formulate one or more goals you would like to accomplish during the upcoming week. Suggest any necessary changes you would need to make to accomplish your goal(s). Write a thorough analysis of the implications of the proposed schedule changes toward each activity and time period they might affect.

Synthesize your work into an interesting booklet for the other members of your class to read.
