

Mathematics, Geometry
Unit V: Lesson 1

Art: **The Symmetry of God**

Many items in nature exhibit geometric shapes and, much to our wonder, are symmetrical designs as well. Reflection symmetry and rotation symmetry are of interest here. The former is often called bilateral symmetry and the latter, point symmetry.

Search out picturesque items on campus, at the zoo, beach, or park, and around your home. Look for flowers, sea creatures, insects, trees, leaves, seeds, fruit, animals, etc. Take pictures of these.

Present your pictures with musical accompaniment and narration for a special feature or devotional talk for your school or church. If you made prints, arrange them in an album by type and with written commentary to display the unique creativity of God.
