

Social Studies, Grade 7

Unit III: Lesson A4

Graph: **Agricultural Production**

Select at least six different areas or nations from North America, South or Central America, Africa, Europe, and Asia. Using current resources, compute the agricultural production per agricultural worker in each country or area. Graph your data. Most sources state that North American farmers are the "most efficient."

Write several paragraphs comparing your data, attempting to defend that statement and suggesting reasons why it may be true. Include a summary of other factors that influence agricultural production.
